

=====

Sonatype Nexus

=====

=> Nexus is an open source software (OSS) & It is free of cost.

=> It is used as Artifactory Repository Server.

=> It is used to store project build artifacts

Ex: jars, wars

=> Project artifacts will be stored in artifactory server for backup purpose.

=> The current version of nexus is 3.x version.

Note: The alternate for Nexus tool is JFrog.

=====

Q) what is the difference between github and nexus ?

=====

=> Git Hub is used as source code repository server. It is used to store project source code.

=> Nexus is used as artifactory repository server. It is used to store project build artifacts (jar and war).

=====

Nexus Server Setup

=====

Setup Doc : <https://github.com/ashokitschool/DevOps-Documents/blob/main/07-Nexus-Setup-Docker.md>

=====

Nexus Repository Types

=====

=> In nexus we can create 2 types of repositories

1) Snapshot Repository

2) Release Repository

=> If project is under development then that project artifacts will be uploaded into snapshot repository.

=> if project is completed then that project artifacts will be uploaded into release repository.

Snapshot Repo URL : <http://13.233.247.120:8081/repository/ashokit-snapshot-repo/>

Release Repo URL : <http://13.233.247.120:8081/repository/ashokit-release-repo/>

=====

Nexus Integration in CI CD

=====

=> We can integrate "nexus repository artifact upload" process as part of Jenkins CI CD Pipeline.

Note: Once maven build process got completed then we can upload artifact into nexus repository.
