INSTALLING LINUX

Linux Installation

Download the Install Image

One of the first tasks is to select a Linux distribution to install. Ubuntu is very popular, so it will be used here. First, we need to download the installation DVD/USB image. We will go ahead and download Ubuntu 20.04.

Once the file is downloaded to the local system, the installation can begin.

- If you are installing directly onto your hardware, replacing the existing operating system, follow the instructions above to download the Ubuntu ISO and create the USB, then skip ahead to the *"Install Ubuntu"* section, skipping the creation of the virtual machine section, as it is not required.
- If using a virtual machine, VMware Player or Oracle Virtual Box are popular choices. We will use VMware Player to keep it shorter. You can continue with the *"Create a VMware Virtual Machine"* section.
