

# Finding Files

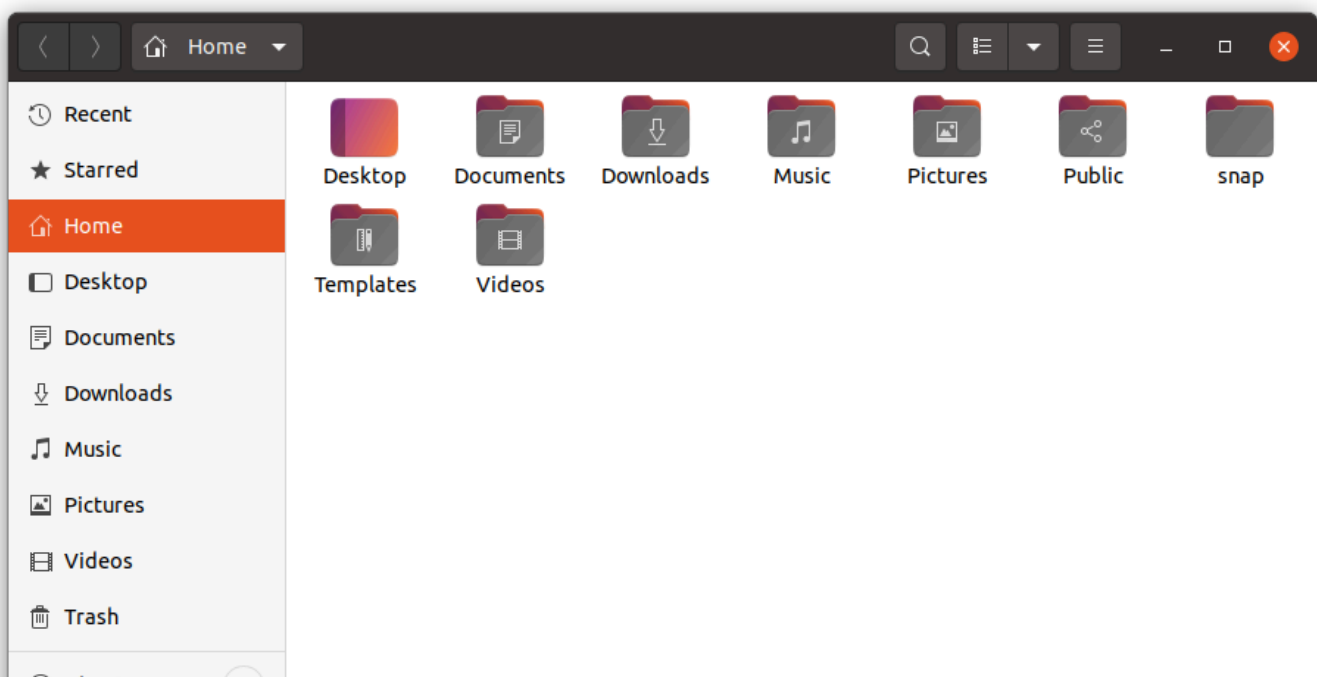

Using the command line to locate files will become second nature over time; we discuss command line and commands later in the course.

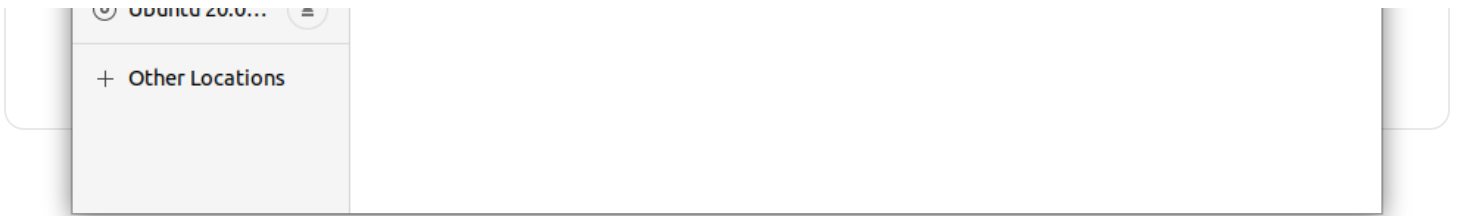

The Gnome file manager has many attributes, including different icons depending on the distribution; here are some samples of the file manager icons:

**File Manager Icons**

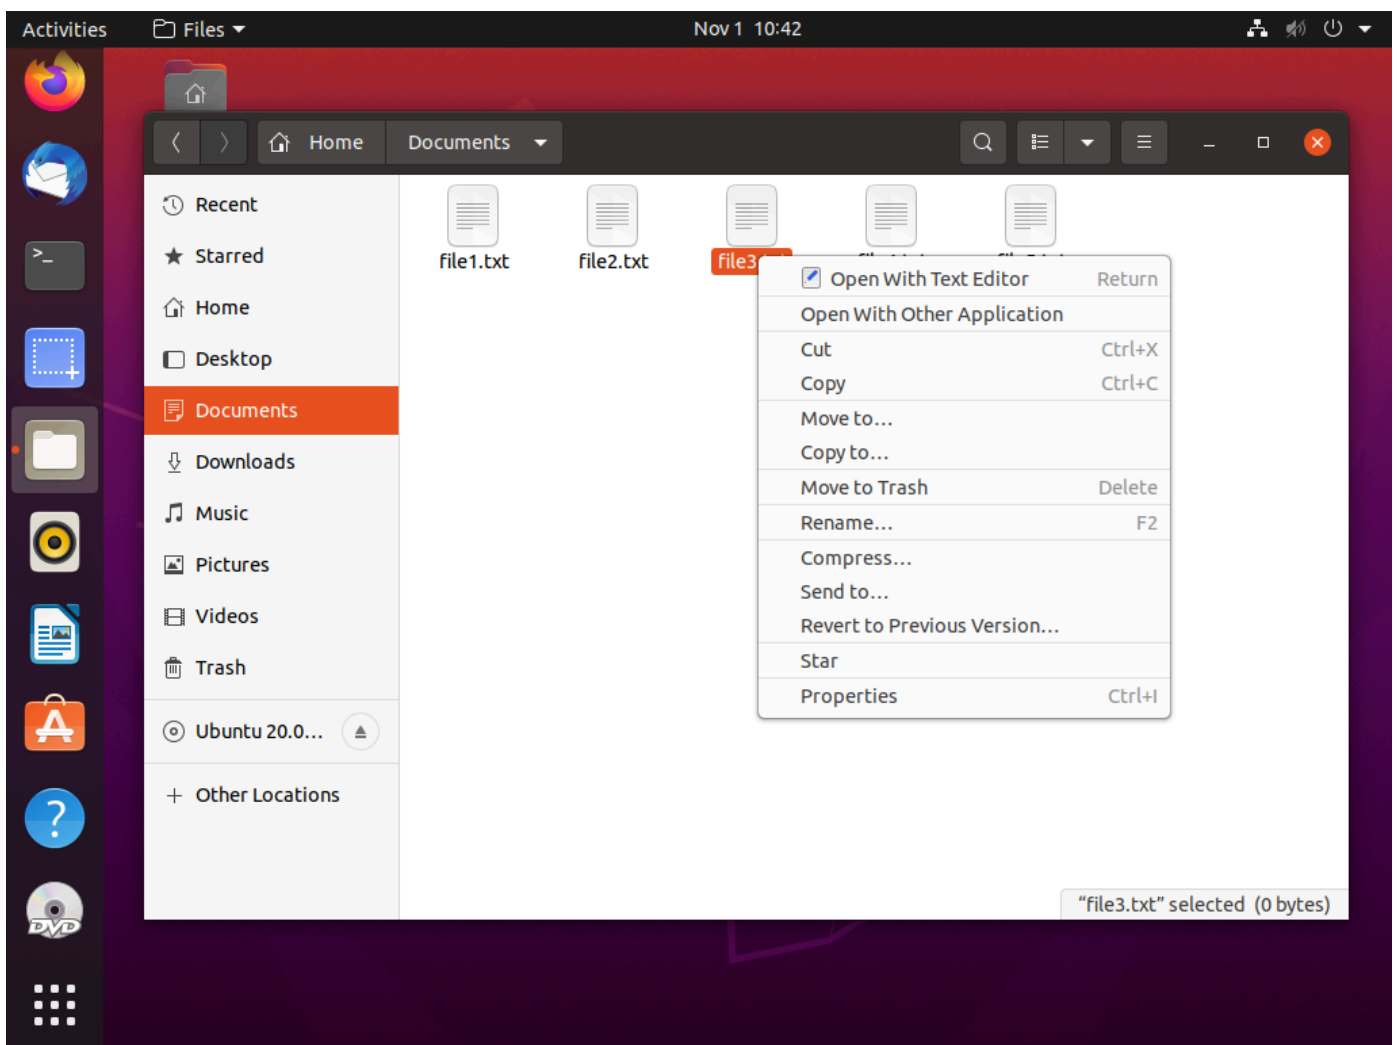

Open the file manager:

## Screenshot of File Manager

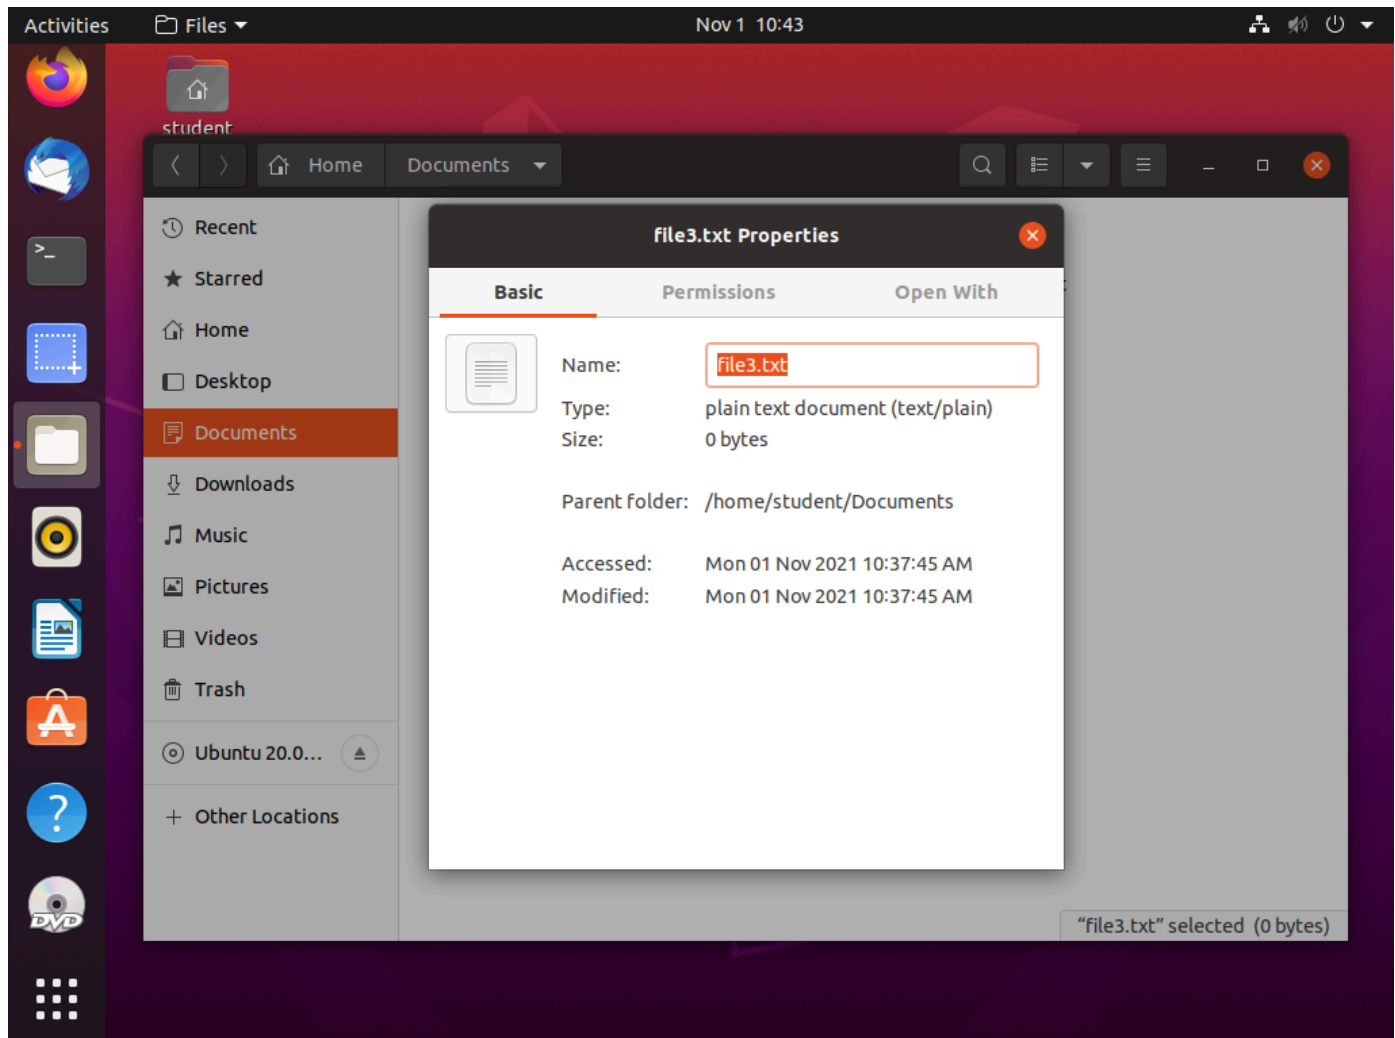

The file manager presents folders and files starting with the user's home directory:

## Screenshot of Files in the Home Directory

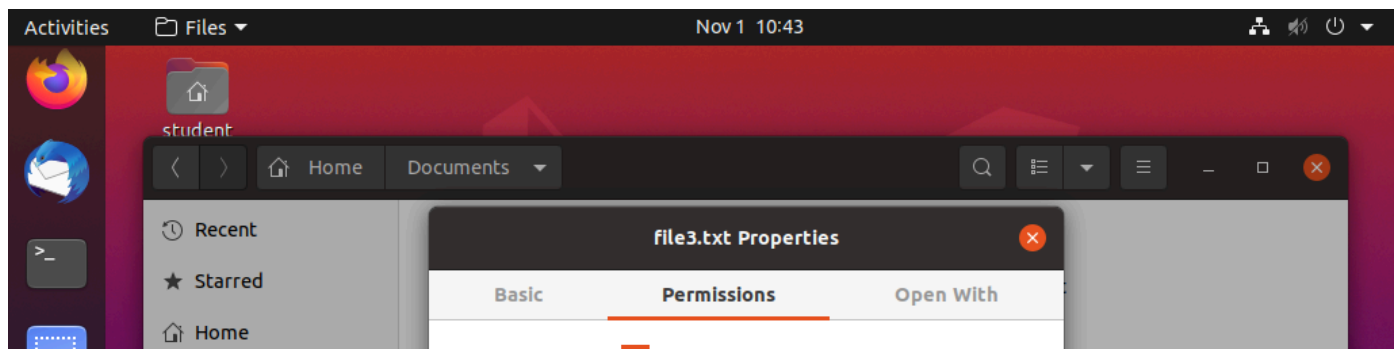

Selecting a document and using the right click on your mouse shows some action items to perform on

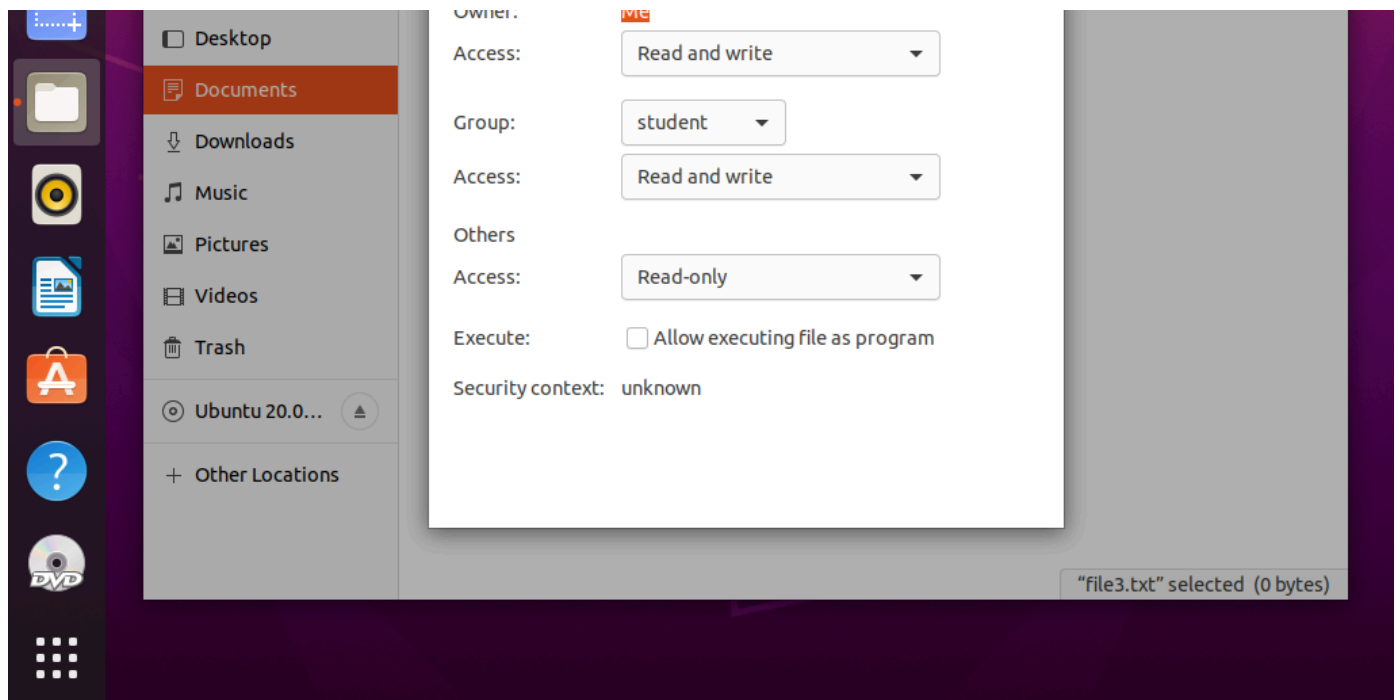

the file. The file properties can be displayed:
