

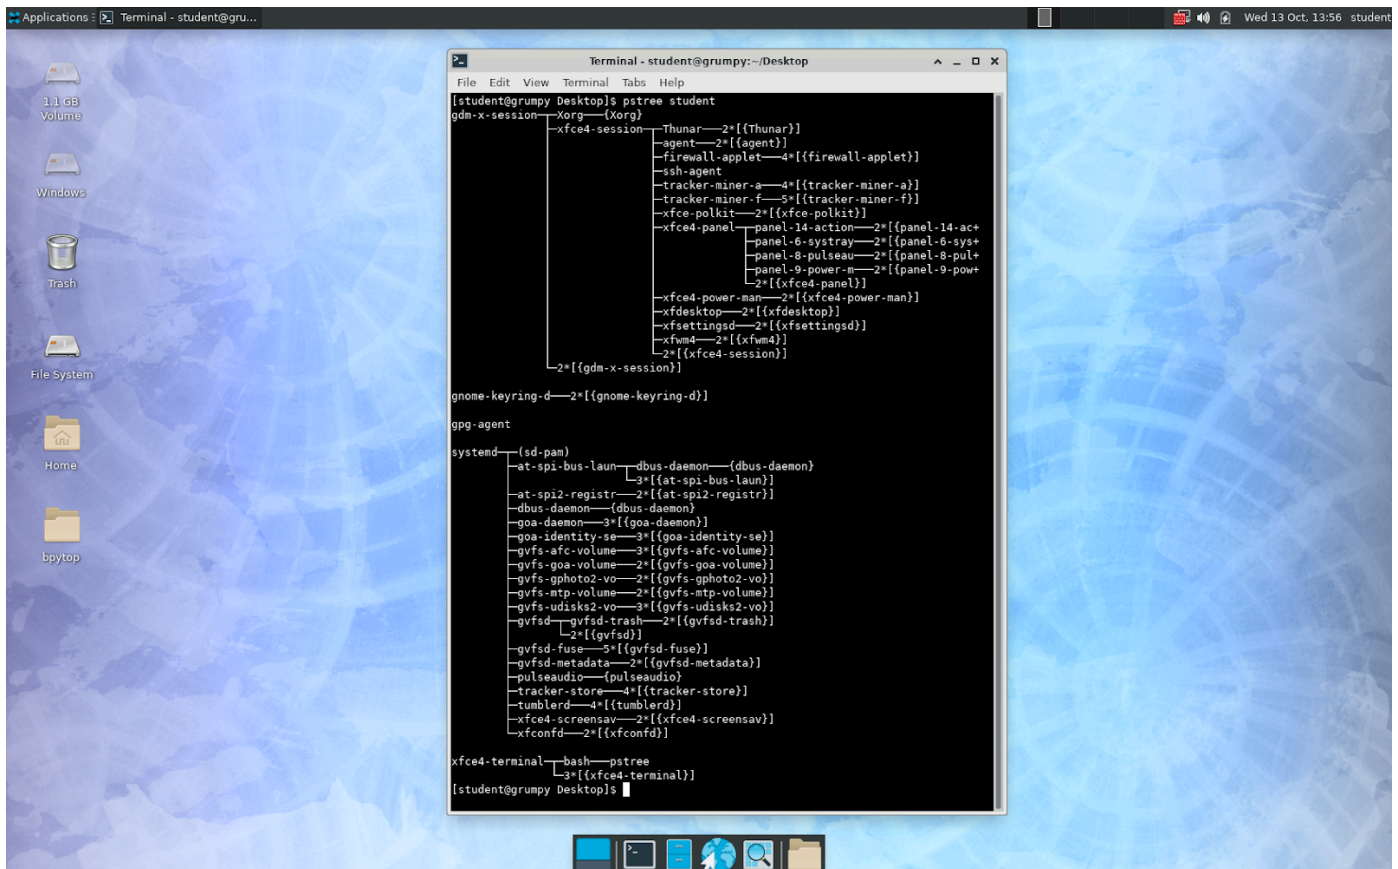

Graphical User Interface (GUI)

A graphical user interface (GUI) is an interface that has a menu, dialog boxes, and buttons that make it easy for an end-user to perform a task with the click of a mouse. IT Associates will have a GUI interface on many of the systems they work with. As an IT Associate, knowing and assisting end-users with these GUIs may be a large part of your duties. Many of the Linux desktop distributions have GUIs.

Graphical User Interface

As not all user interfaces are text-oriented, Graphical User Interfaces (GUIs) have become very popular.
