## Create a VMware Virtual Machine

Let's learn how to create a Virtual Machine. We will create a VMware VM, but you can choose to use Oracle VirtualBox instead.

Select "Expand" to learn the steps in creating a virtual machine.

### Steps to Creating a Virtual Machine

#### Download the VMware Workstation Player Close ^

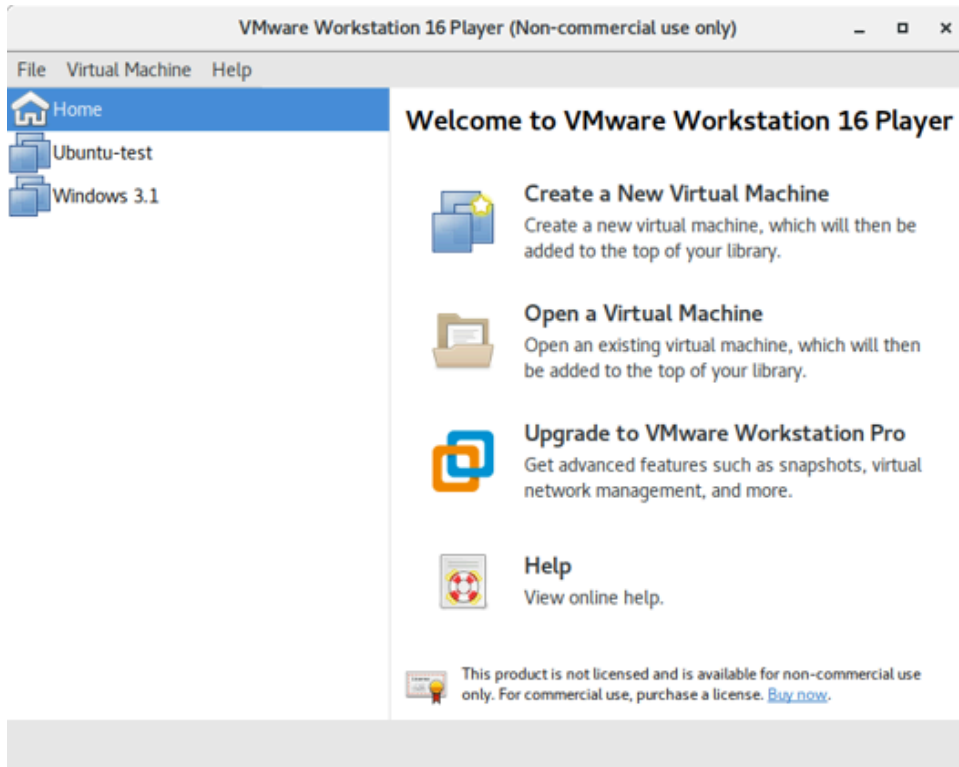

First, download the [VMware Workstation Player](#) for your operating system.

**Screenshot of Download Page for VMware Workstation Player**

#### Create a New VM Close ^

In order to create a new VM, start the VMware player and select the "Create a New Virtual Machine" option.

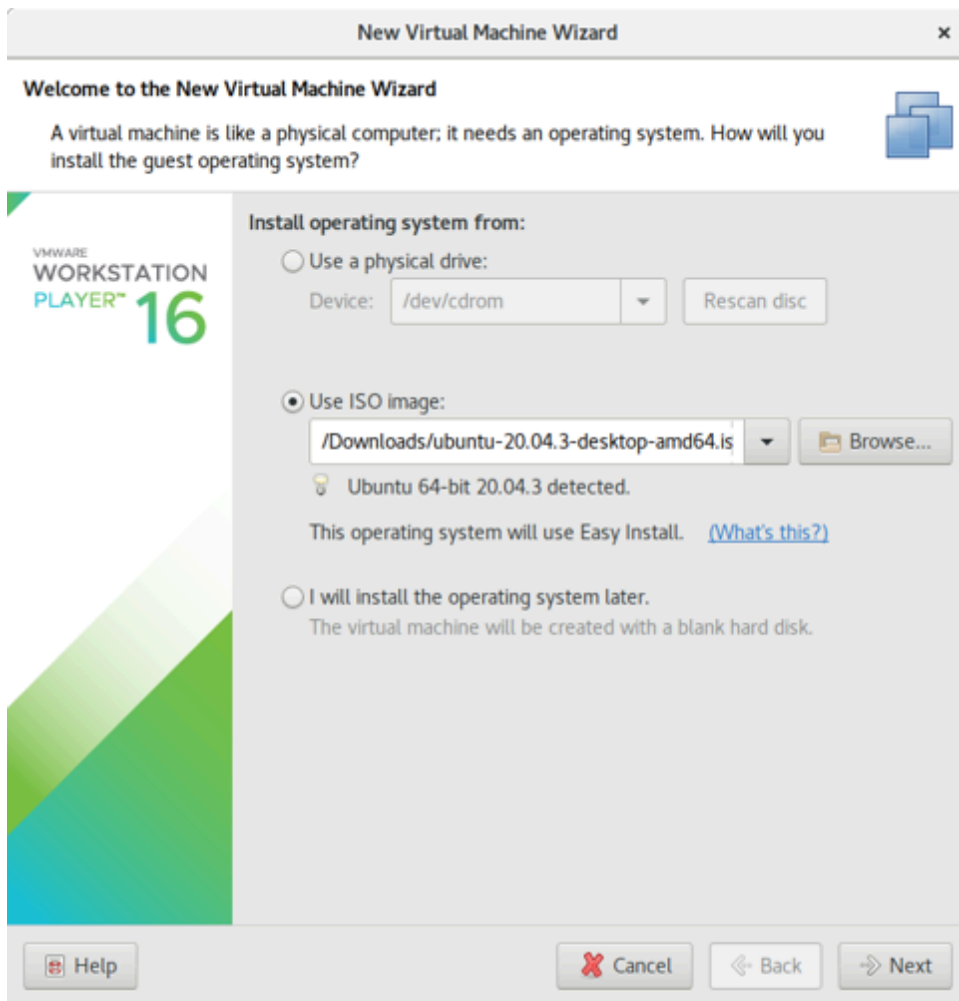

**Screenshot of VMware Workstation Home Screen**

## Select the Ubuntu ISO Image

Close ^

Select the Ubuntu ISO image you downloaded earlier. You will use it to install Ubuntu 20.04 on your new VM. Select *Next*.

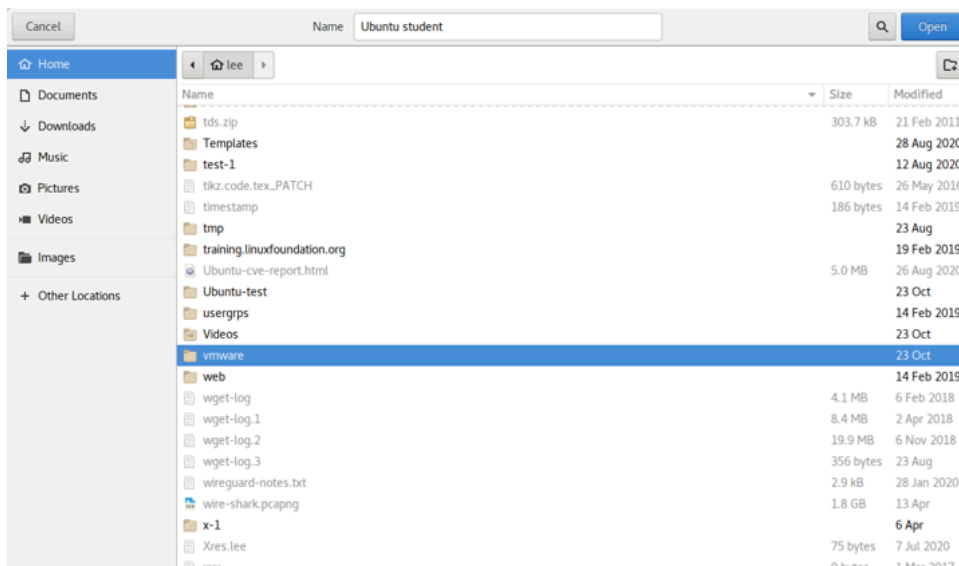

**Screenshot of New Virtual Machine Wizard: Selecting ISO Image**

Close ^

## Select Location for Virtual Disks and Configuration Files

Select a location for VMware to place the virtual disks and configuration files.

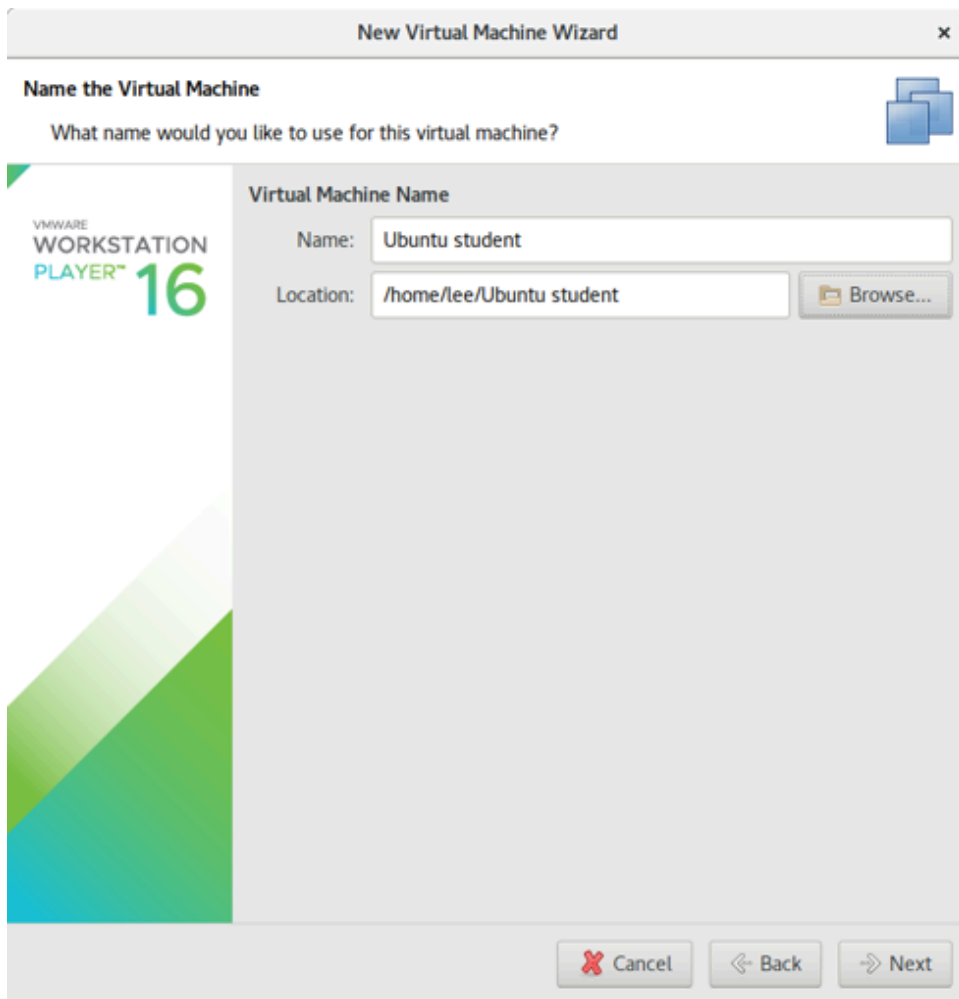

**Screenshot Showing the Storage Location for Virtual Disks and Configuration Files**

Name the VM

Close ^

Name the Virtual Machine. Then, click *Next*.

**Screenshot of New Virtual Machine Wizard: Providing VM Name**

## Specify Disk Capacity

Close ^

Specify the storage size; a minimal OS will use less than 10G. You also have the option to split the VM's disk into smaller parts. Some find it more convenient to have one large file, rather than several smaller files. Click *Next*.

## Confirm Settings & Create

Close ^

Confirm the settings, then start the creation and installation by clicking on *Finish*.
